

# QuickMeasure™

## ON SCREEN

Digital blueprint measuring made easy!

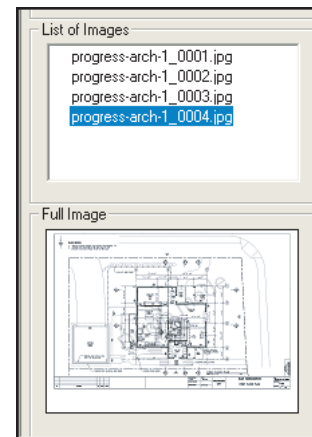

### Takeoff Images

QuickMeasure OnScreen™ allows the user to select line and area fill colors to differentiate takeoff items. Each takeoff item maintains its own picture. Combine takeoff items to see a complete picture of all the items measured. All images are saved on your computer and can be retrieved at any time. Print a picture of a single takeoff item or a combined picture of an entire sheet.

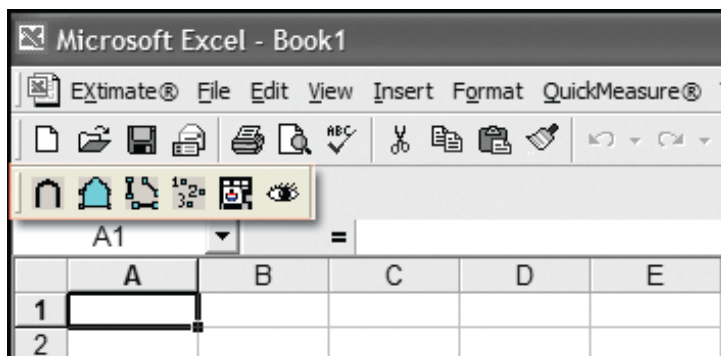

### Importing Images

QuickMeasure OnScreen™ has the ability to import files directly from a CD or from most online plan services. Files supported are PDF, TIF, DWG, DXF, DWF, CPC, JPG, BMP, GIF, WMF and EMF. If you do not see the file format you require, please give us a call.

### Excel® Integration

QuickMeasure OnScreen™ offers seamless integration with your existing Microsoft Excel® spreadsheets. A custom menu added to the Excel® tollbar allows you to select your measuring function directly from your existing spreadsheet. Measurements are sent directly from the OnScreen application to your spreadsheet with a simple click of the mouse. Images of your takeoff are stored with the quantity in the Excel® cell.
